PROJECTS

1. Online Library Management System

A college "Online Library Management System" is a project using Core PHP that manages and stores books information electronically according to student needs. The system helps both students and library manager to keep a constant track of all the books available in the library. It allows both the admin and the student to search for the desired book. It becomes for colleges to keep continues check on the books issued and returned and even calculate fine. This system allowing to keep track of information such as issue date, last date to return the book and even fine information and thus there is no need to keep manual track of this information which thereby avoids chances of mistakes.

2. Summer Bay Hotel Booking

It is a web application for hotel room booking. Users can register to the website using email account or with social accounts. It is used Node.js as backend with Moleculer.js as middleware. React.js is used for Front End UI Development. Social account authentications done through Passport.js

3. Lucky Shoppy

Ecommerce Application It is a web application for online grocery items purchacing. Users can register to the website using email account or with social accounts. It is used Node js as backend with Next js is used for Front End UI Development Social account authentications done through Passport js
